LEGISLATIVE PACKET

The National Sovereignty and Resilience Act

A citizen-authored federal framework — 36 titles, 218 sections

Prepared for congressional staff, committee counsel, and policy reviewers

Section-by-section overview · Fiscal architecture & methodology · Committee-jurisdiction map · Constitutional posture · Priority entry points

Principal Architect: Santonio Sanders | TheAmericanDeal, Inc. | Version 1.0, July 2026

Evidence status. Revenue and impact figures in this packet are NSRA model estimates built on published CBO, JCT, OMB, Treasury, and federal-agency baselines. They are internally modeled and sensitivity-tested — **not yet officially scored**. Independent and congressional scoring are pending and welcomed.

1. What the NSRA Is

The National Sovereignty and Resilience Act (NSRA) is a comprehensive federal statute of 36 titles and 218 sections. It is a mechanical enforcement framework — automatic numeric triggers, strict-liability rules, and self-capitalizing fiscal mechanisms — designed to correct structural market failures without ongoing appropriations or open-ended agency discretion. It does not increase deficit spending; it redirects, recaptures, and rebalances revenue through a defined fiscal architecture, and routes proceeds into the Sovereign Infrastructure Reinvestment Fund (SIRF).

Two design commitments shape the whole bill. First, Congress sets every major policy choice and numeric trigger in the statute itself (the 15% variance threshold, the 50-unit housing cap, the dollar thresholds), leaving agencies ministerial computation rather than delegated policymaking. Second, small businesses under $10M in annual revenue are expressly exempt from all Covered Entity obligations.

Key figures at a glance

Figure	Value	Evidence status
Year 1 annual revenue	**$749B**	Gov. baseline + Internally modeled
True annual deficit reduction	**$554B**	Gov. baseline + Internally modeled
Balanced budget (central estimate)	**Year 4**	Internally modeled · Sensitivity tested
Americans in direct Year-1 relief	**79M+**	Gov. baseline (uninsured, SNAP, veterans)
Scored revenue streams	**12**	Schedule G methodology
Small-business exemption	**< $10M revenue**	Statutory text verified

Evidence classifications follow The American Deal Evidence Standard (see §6). "Internally modeled" means an NSRA estimate derived from public baselines using a defined method; it is distinct from official CBO/JCT scoring, which is pending.

2. How It Pays for Itself

The NSRA does not rely on new broad-based taxes on households or small businesses. It redirects value currently leaving the domestic economy through legal but structurally harmful channels, organized across seven revenue subledgers (The 7-Subledger Math Engine™). Each subledger is self-contained: its revenue funds only the programs assigned to it, with no cross-subsidy absent explicit statutory authorization.

Representative scored revenue streams

Revenue mechanism	Basis / source	Note
Offshore & structural tax recovery	IRS enforcement baselines	Recapture, not rate increase
G7 pharmaceutical price parity savings	PNAS 2024 G7 differential analysis	~$55B/yr federal savings
Structural variance penalties	FTC/DOJ civil-penalty baselines	Enforcement-driven
Data-commons tariff ($0.02/GB training ingestion)	Cloud pricing & training-volume models	Novel stream
Real-estate stabilization proceeds	FDIC/FHFA concentration data	Divestiture-triggered
Corporate rate restoration (21%→28%) & FTT	JCT scoring analogs	Standard scored mechanisms

Full assumptions, calculations, and source citations are documented in **Schedule G** of the statutory text, available in the Policy Vault at TheAmericanDeal.org. A built-in fiscal gate (Sec. 005) requires CBO certification of revenue sufficiency before any title disbursing over $500M/year activates — a statutory control distinct from, and not a substitute for, official CBO scoring of the bill as a whole.

3. Committee-Jurisdiction Map

Titles were mapped to committees using published House and Senate jurisdictional rules (Rules X and XXV). The analysis identifies jurisdictional sequencing — not constitutional durability — as the primary procedural variable. Selected primary assignments and the highest-probability sequencing points:

NSRA subject	Primary jurisdiction	Sequencing note
Pharmaceutical parity (Schedule F / drug pricing)	Senate Finance / House Ways & Means	FDA implementation rider to HELP/E&C (IRA 2022 precedent)
Baseline medical provision & Medicare	Ways & Means (revenue core)	Delivery-system title travels to Energy & Commerce as companion
Housing 50-unit MSA cap (Title XIV)	Senate Banking / House Fin. Services	Due-process title (XVIII) referred to Judiciary
Semiconductor & supply-chain sovereignty	Armed Services (nat'l-security findings)	Commerce sequential referral (CHIPS Act model)
Veterans health sovereignty (Title XXV)	Veterans' Affairs (both chambers)	Among the most bipartisan panels; standalone-viable
Household stability guarantee	Finance / Ways & Means (SIRF expenditure)	Drafted as fiscal authorization, not a SNAP amendment

Design response to sequencing risk: several titles are drafted to travel as clean standalone or companion vehicles with their own referral paths, reducing the multi-committee bottleneck that is the most common procedural obstacle to a bill of this scope.

4. Constitutional Posture

The bill is unusually self-aware. It embeds named constitutional defenses in its text and has been through an internal red-team audit against the doctrines most likely to be raised by a well-resourced corporate defendant or a State. This is presented plainly: the defenses are real and materially improve survivability; some questions remain open and are flagged rather than hidden.

Embedded defenses (in the statutory text)

- Mathews v. Eldridge pre-deprivation notice schedules — 45/60/180 days (Sec. 1802/1804).
- Enumerated-sector limit citing West Virginia v. EPA to answer major-questions objections (Sec. 004(c-1)).
- Article III standing specifications and Commerce Clause findings (Sec. 1801, 1805(d), Schedule B).
- Just-compensation architecture for Title XIV divestitures, with a $2B reserve, and severability (Sec. 205).

Actively hardened against recent doctrine

Following *SEC v. Jarkesy* (2024), penalty adjudication was moved out of in-agency proceedings: no civil penalty, clawback, seizure, or forfeiture is finally assessed except by a U.S. District Court with the Seventh Amendment jury right preserved (Sec. 1606). Removal-power exposure was addressed by making the Administrator removable at will (Seila Law) and designating ALJs as Lucia-compliant inferior officers confined to equitable, status-quo preservation. Appropriations exposure is addressed by recasting SIRF draws as express standing statutory appropriations on the CFPB v. CFSA (2024) formula and separating enforcer budgets from collected penalties.

Open items are documented in the full Legal Architecture Review (Policy Vault), including proportionality governors for fixed penalty multipliers (Eighth Amendment) and preserving a guaranteed Article III takings remedy. Committee counsel are invited to audit these directly against the timestamped vault text.

5. Priority Entry Points

The practical question is not which committee passes the full NSRA, but which provisions can enter the institutional record as standalone or amendment vehicles. The highest-probability paths:

Pharmaceutical parity (Finance / Ways & Means)

G7 median pricing has demonstrated cross-party interest across several prior vehicles; the automatic compulsory-licensing trigger is the distinguishing element. Strongest as a standalone bill filed first to establish the legislative record.

Veteran healthcare (Veterans' Affairs)

Title XXV aligns with the author's operational background as a former VA ambulatory-care director. Veterans' Affairs panels are among the most bipartisan in Congress and regularly pass standalone veterans-health legislation.

Manufacturing & supply-chain sovereignty (Commerce / Armed Services)

Supply-chain and semiconductor provisions align with existing CHIPS-Act infrastructure and command the broadest coalition — economic nationalists, defense hawks, and industrial-policy advocates.

6. The Evidence Standard & How to Engage

Every material claim on TheAmericanDeal.org and in this packet is classified by source authority, calculation method, confidence, sensitivity, and external-review status. The underlying models remain proprietary; the standard they are held to is public. Current classifications: Government baseline · Statutory text verified · Internally modeled · Sensitivity tested · Legal review completed · Independent review pending · Congressional score pending.

The full statutory text, Schedule G revenue methodology, committee analysis, and Legal Architecture Review are available in the Policy Vault at TheAmericanDeal.org. To request a title-specific briefing, the section-by-section, or a working session with the principal architect:
