NSRA Title XXXIX · Digital Government Modernization

Government That Works Online: Retire the Old Systems, Build One Front Door

The United States ranked **first** in the UN's e-government index in 2003 through 2005. In 2024 it ranked **19th**. Benefit and payment systems built decades ago still run core programs, crash during emergencies, and leak money. Title XXXIX replaces them on a deadline and pays for it from the waste it stops.

What it does

Provision	Draft text
Find the old systems	Every major agency inventories mission-critical systems over 20 years old or on unsupported code within 180 days (Sec. 3902(a))
Retire them on a deadline	Seven-year retirement schedule, Social Security, Medicare, Medicaid, veterans', tax, and unemployment payments first (Sec. 3902(b))
Self-repaying fund	A Legacy Retirement Account in the Technology Modernization Fund; agencies repay from documented savings (Sec. 3902(c))
Unemployment systems that hold	Grants for State systems that handle ten times normal claim volume with built-in fraud detection (Sec. 3902(d))
One front door	One secure portal to apply for and manage federal services; with your consent, tell the government once instead of re-entering the same information (Sec. 3903)
Privacy first	Minimum necessary data, Privacy Act protections, no data sales, no law-enforcement use without a warrant, and in-person and phone options (Sec. 3903(c)–(d))
Cost	$5 billion a year for five years, paid first from improper-payment savings (Sec. 3905)

Operative text: Title XXXIX (Secs. 3901–3906).
