Deficit limits in law (Sec. 3406(f))

The core programs, including the $85B middle-class tax cut, pay for themselves at full ramp; the Fiscal Sustainability Plan of Sec. 3410 supplies the deficit reduction, for about $3.2T over ten years including lower interest costs. Sec. 3406(f) caps the deficit at 4.5% of GDP by Year 4 and 3% by Year 8, and brings the debt onto a falling path, as a share of the economy, by the end of two presidential terms. Our model puts the deficit at about 5.5% of GDP in Year 4 and in Year 10; reaching the limits takes about 1.0% and 2.5% of GDP more, from a plan Congress passes or the automatic trigger (new adjustments capped at 0.5% of GDP a year; Social Security, Medicare, Medicaid, veterans, SNAP and the Basic Minimum Plan exempt).

Assumptions: revenue realization 86/94/98/100% in Years 1–4, growth 4% a year; programs phase in 55/75/90/100% behind certification gates, growth 4.5% a year; interest savings at 3.5% on debt avoided. Scenario B discounts High-confidence streams 5%, Moderate 20%, Preliminary 50%. Full detail: Schedule G and the scorer workbook at theamericandeal.org/data/NSRA_Scorer_Workbook.xlsx. Annual figures are rounded; totals may differ by $1B.
