The Act at a glance

The National Sovereignty and Resilience Act is a complete bill of 41 titles and 280 sections. It pays for what it creates and then cuts the deficit: it recaptures value that leaves the domestic economy, makes high earners and large corporations pay a fairer share, and writes deficit limits into law. It is owned by no party and published in full for whoever runs on it first.

What problem does the NSRA solve?

Value that should stay in the domestic economy (corporate rents, monopoly drug pricing, untaxed extraction, offshore profits) leaks out while households absorb the cost. The NSRA recaptures that value and returns it as lower costs for families, without raising income taxes on households under $400,000.

What are its major public benefits?

$35 insulin and G7-matched drug prices; coverage with no premium up to 250% of the poverty line for the roughly 30 million uninsured; zero-interest federal student loans; a cap on corporate single-family landlords at 50 units per metro; expanded veterans' health; self-funded paid leave; and a ban on congressional stock trading.

How is it financed?

Eighteen revenue streams, led by Social Security tax on wages above $400,000, corporate base broadening and a 28% corporate rate (Sec. 3410(k)), a minimum tax on foreign earnings, IRS enforcement, a 0.1% financial transaction tax, a 39.6% top rate above $400,000, and a carbon fee with energy-bill credits for lower-income households. Every stream is itemized in Schedule G, with the middle-class tax cut of Sec. 2421 ($85B a year) costed against it.

What is the projected fiscal effect?

About $526B a year in revenue at full ramp, less $495B in program costs and infrastructure, including the $85B middle-class tax cut, leaves about $31B a year, so the programs pay for themselves. The Fiscal Sustainability Plan of Sec. 3410 saves about $575B a year at full effect. Together: about $5.7T over ten years, or $6.5T including lower interest costs (range $5.6T to $7.0T).

Does it balance the budget?

Not on its own, and it does not claim to. Sec. 3406(f) caps the deficit at 4.5% of GDP by Year 4 and 3% by Year 8 and brings the debt onto a falling path, as a share of the economy, by the end of two presidential terms. The bill and its plan cover about four-fifths of the drop to the Year 4 limit; the Year 10 limit takes about 1% of GDP more, from a plan Congress passes or the automatic trigger. Social Security, Medicare, Medicaid, veterans, SNAP and the Basic Minimum Plan are exempt from automatic cuts.

What begins in Year 1?

Statutory price caps, the corporate housing cap, enforcement activation, and first-year coverage. Larger programs phase in behind revenue certification gates so benefits never run ahead of verified revenue.

Why are the titles integrated?

Revenue, enforcement and benefits are interdependent. Titles are severable and can move alone under Section 205, but separating a benefit from its funding changes its fiscal effect. Each title carries a dependency label.

What does adoption require?

Anything from a 30-minute briefing to sponsorship of a single title to full introduction. No endorsement from TheAmericanDeal.org is required; the text is published for public use.

Core figures, with status labels

Figure	Value	Status
Revenue at full ramp (Years 3–5)	$526B	Modeled on published CBO, JCT and Treasury scores; Year 1 about $453B; conservative floor $430B
Costs, outlays and infrastructure	$495B	Schedule G, section 3
Core programs and middle-class tax cut, net per year	$31B	Paid for at the central estimate; at the conservative floor about –$66B
Fiscal Sustainability Plan (Sec. 3410)	$575B/yr	Full effect; re-scored against SSA actuarial and CBO option estimates
Ten-year deficit reduction	$6.5T	Including interest; $5.7T before interest; core alone $0.6T
Deficit limits in law	4.5% / 3%	Sec. 3406(f): share of GDP by Year 4 / Year 10
Uninsured people covered	~30M	~27M before 2026 plus CBO-projected rise after enhanced credits expired

Evidence standard: fiscal figures are NSRA model estimates built on published CBO, JCT, OMB, GAO, Treasury, SSA and OECD baselines, with income and payroll tax provisions checked in the open-source Tax-Calculator model. They are not official CBO or JCT scores, which are pending and welcomed. TheAmericanDeal.org is an independent project of Santonio D. Sanders.
