NSRA Title XXXVII · Science, Research & Talent

Put America Back in the Lead on Science

Federal research spending was **1.86% of GDP in 1964**. It is about 0.65% today. China now spends roughly as much as the U.S. on R&D at purchasing-power parity, and Congress has funded the National Science Foundation at about half of what it authorized in the CHIPS and Science Act. Title XXXVII fixes the gap on a schedule, with a hard cap and a deficit-neutral funding source.

What it does

Provision	Draft text
A national target	Federal R&D reaches 1% of GDP within ten years, on a published straight-line path; at least 30% of the increase to basic research (Sec. 3702)
Fund what Congress already passed	NSF, DOE Office of Science, and NIST at CHIPS and Science Act levels; NIH growing with biomedical inflation plus one point (Sec. 3703(a))
No more lab whiplash	A Research Stability Reserve keeps existing multi-year grants at 90% or more through budget fights; half of new grants run four years or longer; 15% reserved for early-career scientists (Sec. 3703(b)–(d))
From lab to factory	Regional tech hubs outside the top ten research metros and lab-to-market grants with a domestic-manufacturing condition on resulting patents (Sec. 3704)
Research security	No funds to participants in malign foreign talent programs or entities controlled by countries of concern; full disclosure of foreign support (Sec. 3705)
Keep the talent we train	Green cards outside the annual caps for U.S.-earned STEM PhDs and master's graduates from research universities with a job offer at or above the median wage, with adversary-country screening and anti-displacement attestation (Sec. 3706)
Cost	Capped at $30 billion a year from SIRF Tier 3 capacity, certified deficit-neutral by OMB under the conservative CBO-style floor (Sec. 3707)

Operative text: Title XXXVII (Secs. 3701–3708).
