Fact sheet

At a Glance

The American Deal is the public campaign for the National Sovereignty and Resilience Act (NSRA), a citizen-authored federal framework of 41 titles and 279 sections. It is designed to restore fiscal balance and would deliver material household benefits without adding to the deficit, funded by recapturing value that currently leaves the domestic economy without raising income taxes on households under $400,000. The agenda is complete, internally costed on published government baselines with official CBO/JCT scoring pending, and owned by no party, published in full and open to whoever runs on it first.

The formal legislative vehicle is the NSRA. “The American Deal” is the public movement and governing promise. The project is an independent project of Santonio D. Sanders. No company or nonprofit has been formed.

Key Figures, With Sourcing

Claim	Figure	Basis
Annual revenue at full ramp (Years 3-5)	**$542B**	NSRA model on CBO/JCT/OMB/Treasury baselines; Year 1 ~$466B modeled
Ten-year deficit reduction (with Sec. 3410)	**$2.9T**	NSRA model; range $2.0T-$3.5T
Middle-class income-tax cut	**12%/22% brackets to 10%/20%**	Sec. 2421; $128B/yr; recaptured above $400K
Deficit limits (in law)	**4.5% to 3% of GDP**	Sec. 3406(f); Year 4 and Year 10
Uninsured Americans covered	**~30M**	Census ACS + CBO 2026 coverage-loss estimate; also 42M SNAP, 9M veterans (overlapping)
Federal drug-pricing savings	**~$55B/yr**	PNAS 2024 G7 price-differential analysis
Insulin price cap	**$35/mo**	Proposed: Title XIII, Sec. 1303
Corporate single-family housing cap	**50 units/metro**	Proposed: Title XIV, Sec. 1401
Small-business exemption	**< $10M rev.**	Proposed: Sec. 003(3) (Covered Entity definition)

Fiscal figures are NSRA model estimates on published government baselines, internally modeled and sensitivity-tested, not yet officially scored. Independent and congressional scoring are pending. The Figure-by-Figure Sourcing guide traces each figure line by line.

The Nine Promises

Anti-Extraction. anti-monopoly, PE limits, capital-flight lock, national wealth fund (Titles II, XX, XXII)

Anti-Corruption. congressional stock ban, emoluments enforcement, impoundment and inspector-general safeguards, foreign-influence transparency, press freedom, due process (Titles I, XVIII, XXVII, XXIX, XXXV, XXXVI)

Pro-Worker & Pro-Farmer. organizing rights, pension protection, wage floors, food security (Titles IV, VI, VII, XXVIII)

Affordable Health & Medicine. $0-deductible coverage, G7 drug pricing, $35 insulin, veterans' health (Titles XIII, XXI, XXV, XXXI)

Housing & Shelter. corporate single-family cap of 50 per metro, Shelter Security Fund, buyer support (Title XIV)

Clean Water & Clean Energy. lead-pipe & PFAS cleanup, water security, grid modernization, advanced fission, hydropower & dam safety (Titles IX, X, XI, XVII)

Future-Building. Child Prosperity Trust, student-debt relief, AI & compute, semiconductors (Titles III, V, XII, XV, XXXIII)

American Security. dollar defense, adversary-capital screen, reshoring, Social Security, trade (Titles VIII, XVI, XXIII, XXVI, XXX, XXXII)

Fiscal Integrity & Self-Funding. self-executing revenue engine, deficit-neutrality certification, household-benefit accounting, SIRF (Titles 0, XIX, XXIV, XXXIV)

Campaign framing

Core Messages

Elections anyone can check. Title XL builds a public, open-source voting system for every race on the ballot, Congress to school board. Each ballot is encrypted and posted to a public ledger as it is counted, every voter can confirm from a phone that their ballot was counted, anyone can verify the totals, and paper ballots are audited before certification. No one can see how anyone voted.

Deliverability, not ideology. A promise the country can actually keep: real benefits in Year 1, and larger benefits only as verified revenue arrives.

Genuine revenue, not borrowing. With its Fiscal Sustainability Plan, the bill pays for its programs and a middle-class income-tax cut by recapturing value leaving the domestic economy, with no income-tax increase on households under $400,000.

Stronger together, built to pass and survive in pieces. As one Act the 41 titles reinforce each other. For passage, the agenda is organized into five coordinated bills, each able to advance and deliver on its own. For durability, a severability clause (Sec. 205) would keep the rest of the Act in force if a court strikes any single title.

Methodology

How the Figures Are Justified

The headline revenue is the sum of 18 scored revenue streams, each built on a published government or peer-reviewed baseline. The 18 streams total about $542B a year at full ramp (conservative floor about $442B). After about $542B in program costs, outlays and infrastructure, that leaves about $1B a year, including the $128B middle-class tax cut, so the programs pay for themselves; the Fiscal Sustainability Plan adds the deficit reduction. Conservative per-stream assumptions are embedded in the gross estimates; enforcement realization and behavioral effects are sensitivity levers in the interactive model, not additional headline subtractions.

From revenue to deficit reduction (full ramp, per year)	
Revenue from 18 scored streams (Scenario A)	**$542.4B**
Less program-linked costs (student-loan zero interest, middle-class tax cut)	**-$183.0B**
Revenue after program-linked costs	**$359.4B**
Less program outlays and infrastructure (Basic Minimum Plan, veterans, housing, other)	**-$358.6B**
Net annual effect before Sec. 3410	**+$0.8B**

With the Fiscal Sustainability Plan of Sec. 3410 (about $369B a year at full effect), ten-year deficit reduction is about $2.6T before interest and $2.9T including lower interest costs (range $2.0T to $3.5T). A downloadable scorer workbook separates every input from the formulas so a reviewer can re-score.

Campaign framing

The Honest Bottom Line

Clinton started with a $290B deficit and closed it in six years, with the dot-com boom providing an estimated 25-35% of the improvement. The NSRA starts from a $1.9T deficit, about 6% of GDP compared with 4.5% in 1992, and no tech boom, yet models about $2.9T in ten-year deficit reduction with its Fiscal Sustainability Plan (pending official scoring), while also delivering coverage, drug relief, and household wealth-building programs.

Metric	Clinton era	Current law (CBO Feb. 2026)	NSRA 2028
Deficit trajectory	$290B deficit to $69B surplus	$1.9T (2026) rising to $3.1T (2036)	**$2.9T ten-year reduction; deficit limits of 4.5% (Yr 4) and 3% (Yr 10) in law**
Balanced budget	Year 6 (dot-com tailwind)	Not within CBO's 10-year window	**Deficit limits in law; balance-plan vote by Year 8**
Healthcare floor	None; 40M+ uninsured	Enhanced ACA subsidies expired 2025; uninsured rising	**$0-deductible coverage for ~30M**
Drug pricing	No controls	IRA (10-20 drugs/yr)	**G7 parity; compulsory licensing**
Housing / PE	No cap	No PE limits	**PE barred from hospitals; 50-unit cap**
IRS enforcement	~$60B gap	IRA enforcement funding cut back	**$15B/yr mandatory, protected**

Campaign framing

Why This Isn't Left or Right

The NSRA is owned by no party and was written outside the party system, to work, not to win a primary. Its planks draw support across the spectrum: banning congressional stock trading, matching G7 drug prices, anti-monopoly enforcement, reshoring and supply-chain security, veterans-first health care, protecting Social Security, and reducing the deficit. Conservatives see security, small-business protection, anti-corruption, and fiscal discipline; progressives see affordability, worker protections, and corporate accountability. The same full draft answers to both.

Anticipated criticism and response

Answering the “Socialism” Charge

Market-based delivery. Universal coverage runs through competing private carriers (the Basic Minimum Plan), with a required medical-loss ratio, regulated competition, not nationalization.

No nationalization of industry. The bill would not seize companies. It would cap corporate concentration, enforce existing law, and close loopholes.

Property rights preserved. Divestitures would be market-rate and arms-length, with independent-appraisal rights and Court of Federal Claims review. Pharmaceutical enforcement uses

compulsory licensing with a royalty (patent retained), not expropriation.

Pro-small-business. Businesses under $10M in revenue and landlords under ten units are expressly exempt.

Funded by recapture, not redistribution. Revenue comes from collecting taxes owed, closing loopholes, and recapturing value leaving the economy, not income-tax increases on households under $400,000.

Fiscally conservative by result. It is modeled to reduce the deficit by $2.9T over ten years and writes deficit limits into law (4.5% of GDP by Year 4, 3% by Year 10).

Benefits are earned. Household relief programs would scale up only as verified revenue arrives, a tranche-based escalation lock, not an uncapped entitlement.

Fact sheet

The Review Record

Before publication, every provision was pressure-tested. The campaign documents (without exposing internal work product) that it completed a Constitutional Red-Team against current Supreme Court doctrine, a Congressional Viability Audit, a Committee-Jurisdiction Analysis mapping all 41 titles, a Regulatory & Red-Tape Reduction Audit, a Fiscal Stress-Test (low/base/high scenarios), and an Implementation-Readiness Review. Internal review is complete and documented; independent constitutional review and official CBO/JCT scoring are welcomed and pending. The project states which is which rather than implying outside validation it does not yet have.

Fact sheet

Constitutional Grounding

The short version for reporters: it is built to be constitutional. It rests on the same enumerated powers Congress routinely uses, and it protects the businesses it affects through market-rate compensation and due process, not seizure.

The authority the Act rests on

Commerce Clause. Art. I, Sec. 8, cl. 3, regulation of interstate commerce and financial markets.

Spending Clause. Art. I, Sec. 8, cl. 1, conditions attached to federal funds (coverage, relief, grants).

Necessary & Proper. Art. I, Sec. 8, cl. 18, the mechanisms carrying the enumerated powers into effect.

General Welfare. The taxing-and-spending power behind the fiscal and benefit architecture.

The protections built in

Fifth Amendment takings. Market-rate, arms-length divestiture with an independent-appraisal right and Court of Federal Claims review; drafted to satisfy the Penn Central test.

Licensing, not expropriation. Pharmaceutical enforcement is a compulsory license, patent retained, 8%/12%/4% royalty, just-compensation arbitration, designed to preserve patent ownership and reduce constitutional takings risk. Final classification pending judicial review.

Procedural due process. 45/60/180-day pre-deprivation notice (Title XVIII), engineered to Mathews v. Eldridge, plus an ALJ verification warrant before large asset actions.

Article III & jury right. Consistent with SEC v. Jarkesy, civil penalties go to an Article III court with the Seventh Amendment jury right; ALJs handle only temporary asset-preservation.

Nondelegation & major questions. Mandatory triggers are fixed by Congress in statute, supplying an intelligible principle responsive to Gundy and West Virginia v. EPA.

Severability. Sec. 205, striking one title leaves the rest of the Act in full force, with a fallback appropriation protecting first-tier benefits.

Full detail: Statement of Constitutional Authority and Title 0 (Sec. 002(4)). Campaign positions, pending specialist and legislative-counsel review.

Fact sheet

Employers and Investors

The NSRA keeps the 21% corporate rate, closes narrow corporate loopholes, raises taxes on income above $400,000 and cuts them for the middle class, and it says so in the text. It also cuts the costs business complains about most: health care, slow federal approvals, fragile supply chains, a growing federal debt and the risk of another 2008. This page sets out both columns with the section numbers, so you can do the math for your own company.

What business gets

Lower drug prices in every plan you pay for. Drugs built on federally funded research cannot be priced in the U.S. above the median G7 price, and that ceiling applies to every buyer, private plans included (Sec. 1301). Insulin is capped at $35 a month and essential medicines at $100 a month out of pocket, whatever the insurance (Sec. 1303). Employer family coverage averaged $28,303 in 2026, and workers paid $7,471 of it, so employers carried about $20,800 per family plan. When Milliman modeled a comparable policy for West Health in 2021, extending negotiated drug prices to private insurance under H.R. 3, it estimated employers would pay $195 billion less in premiums from 2023 to 2029. That is an estimate for a different bill, not for the NSRA; no one has yet estimated the NSRA's effect on employer premiums. *(Bill Secs. 1301, 1303; KFF Employer Health Benefits Survey, Oct. 22, 2026; West Health / Milliman, May 20, 2021)*

Coverage for workers, with no employer mandate. The Basic Minimum Plan is open to working-age adults without affordable employer coverage, and to every uninsured child, through private insurers on the existing exchanges (Secs. 2102, 2104). The bill adds no employer mandate. It leaves employer plans and their tax exclusion untouched, and employers may offer cheaper plans that wrap around the BMP for workers enrolled in it (Sec. 2105(e)). *(Bill Secs. 2102, 2104(d), 2105(e))*

Federal approvals on a fixed clock. For infrastructure projects of $50 million or more financed through the bill's investment fund, deadline extensions for federal review are capped at one year unless the sponsor agrees, every federal approval goes on one public schedule, and lawsuits must be filed within 150 days (Sec. 1707). Hydropower licensing and relicensing move to a fixed schedule (Sec. 1704). Environmental, safety and labor standards are unchanged. *(Bill Secs. 1704, 1707)*

Investment the private sector can join. Public infrastructure capital requires private or state co-investment of at least $1 for every federal $1 in manufacturing and energy, with a target of $3 private for every $1 public (Sec. 007). Semiconductor and critical-materials investment runs at $15 billion a year (Sec. 1204). At least 80% of the active ingredients in essential generic drugs must be made in the U.S. within five years, with $2 billion to build the plants (Sec. 1302). The government may not take ownership stakes in private companies except to recover fraud, and must sell any such stake to a domestic private buyer (Sec. 2001(a)). *(Bill Secs. 007, 1204, 1302, 2001(a))*

A level field against offshore profit shifting. The U.S. adopts the 15% global minimum tax agreed to by 140 countries, including a domestic minimum tax so the U.S., not a foreign treasury, collects first (Sec. 2411). Companies that pay their taxes here stop competing against ones that book profits in tax havens. The carbon fee carries a border adjustment so domestic producers are not undercut by imports from countries without one (Sec. 2410). *(Bill Secs. 2410, 2411)*

Protection against another 2008. From the third quarter of 2007 to the first quarter of 2009, U.S. household net worth fell $16 trillion, 24%. The Dallas Fed put the cost of the crisis at $6 trillion to $14 trillion of lost output, $50,000 to $120,000 for every household. The bill sets a mortgage underwriting floor, makes lenders keep at least 5% of the loans they securitize, holds the largest banks' leverage ratios at their January 1, 2025 levels, brings private credit into the stress tests and reporting, and limits credit-rating conflicts (Secs. 1605 to 1611). Those rules protect asset values, and most of the wealth lost in a crisis is held by the people with the most of it. *(Bill Secs. 1605-1611; Federal Reserve Bank of Dallas, Staff Paper No. 20, July 2013)*

Customers with more to spend. The 12% and 22% income-tax brackets drop to 10% and 20%, about $128 billion a year, recaptured from incomes above $400,000 (Sec. 2421). In our run of the open-source OG-USA model, households up to about the 90th percentile of lifetime income spend more in Year 1, and households up to the 70th percentile still spend more in Year 10. Retailers, homebuilders and consumer brands sell to those households. *(Bill Sec. 2421; NSRA*

run of OG-USA 0.6.2, published at /data/open-scoring/og-usa/)

Less federal debt. In the same model run, federal debt is about 4 points of GDP lower by Year 10 and 13 points lower by Year 20. *(NSRA run of OG-USA 0.6.2, published at /data/open-scoring/og-usa/)*

What business pays

Corporate income tax (Sec. 2409): The rate stays at 21%. The base is broadened: the foreign-derived income deduction, LIFO inventory accounting for larger firms, and oil and gas expensing and percentage depletion end; half of advertising costs are amortized over five years.

Global minimum tax (Sec. 2411): 15% minimum on multinationals with revenue above EUR 750 million.

Stock buybacks (Sec. 2420(d)): Excise tax rises from 1% to 4%.

Trading (Secs. 2405, 2413): 0.1% on stock and bond trades and 0.01% on derivatives, plus a 0.02% fee on institutional trades over $1 million. Retirement accounts and individual investors with under $1 million in brokerage assets are exempt.

Large financial firms (Sec. 2415): 15% of profit above a 12% return on equity. Institutions under $10 billion in assets are exempt.

Carbon fee (Sec. 2410): $40 a ton, indexed to inflation, with a border adjustment on imports.

Paid leave (Sec. 3802(e), (h)): 0.4% of wages from employers, matched by workers. Employers with an equal or better plan of their own pay less.

High incomes (Secs. 2408, 2420): 39.6% rate above $400,000 single / $450,000 joint; the 3.8% tax on investment income extends to active business income above $400,000 / $500,000; capital gains and dividends above $1 million taxed as ordinary income; Social Security tax on wages above $400,000.

Private equity (Secs. 2402, 2403): Carried interest taxed as ordinary income; interest deductions on leveraged buyouts capped.

The cost, in our own numbers

Our own model shows what this costs. GDP is about 1.9% lower in Year 1, 1.5% lower in Year 10 and 1.0% lower in Year 20, and business investment is lower than it would otherwise be through Year 20 (4.5% lower in Year 1, 1.6% lower in Year 20), mainly because the bill puts more money in families' hands instead of paying down debt faster. In Year 10, households in the top 1% consume about 2% to 11% less than they otherwise would. The model counts lower drug prices and the productivity of roads and research, but not a lower risk of a financial crisis. CBO has not scored the bill.

Fact sheet

Boilerplate & Bios

Approved, ready-to-paste descriptions. Please quote as written.

One-sentence description

The American Deal is a citizen-authored, fully published federal policy framework, the National Sovereignty and Resilience Act, designed to deliver $0-deductible health coverage with no premium for working families, G7 drug pricing, student-debt and housing relief, a middle-class income-tax cut, and about $2.9 trillion in ten-year deficit reduction with no income-tax increase on households under $400,000.

Organization boilerplate (75 words)

The American Deal is the public campaign for the National Sovereignty and Resilience Act (NSRA), a complete, citizen-authored bill of 41 titles published in full and open to whoever runs on it first. An independent project of its author, it is owned by no party and funded by recapturing value that leaves the domestic economy without raising income taxes on households under $400,000. Fiscal figures are internally modeled on published government baselines; official scoring is pending.

Founder bio (50 words)

Santonio D. Sanders is the principal architect of the National Sovereignty and Resilience Act and founder of The American Deal. A U.S. Navy submarine veteran, he served the U.S. Department of State as a senior IT auditor and cryptographic program manager, auditing secure communications at U.S. embassies and consulates through SAIC, CSRA and GDIT, supported FBI counterintelligence work as a contractor, and directed ambulatory care operations at a VA medical center. He wrote the NSRA outside the political and lobbying systems.

Founder bio (150 words)

Santonio D. Sanders is the principal architect of the National Sovereignty and Resilience Act (NSRA) and the founder of The American Deal. His background is operational rather than political. He served nine years in the U.S. Navy submarine force as a communications electronics technician, earning the Navy and Marine Corps Commendation Medal. He then served the U.S. Department of State as a senior IT auditor and cryptographic program manager through SAIC, CSRA and GDIT, leading a team that audited secure communications at U.S. embassies and consulates worldwide, and as a contractor he has supported FBI counterintelligence work on foreign-adversary threats. At the Department of Veterans Affairs he directed ambulatory care operations at the Jesse Brown VA Medical Center in Chicago, leading about 160 staff across the referral continuum, including community care. He holds an M.S. in health informatics administration from the University of Maryland. He wrote the NSRA outside the party and lobbying systems and published it in full, with figure-by-figure sourcing and an open fiscal model, so it can be checked rather than taken on faith.

Pronunciation

Santonio D. Sanders: san-TOH-nee-oh SAN-ders. NSRA: spell it out, “N-S-R-A.”

Approved titles for attribution

Preferred: Santonio D. Sanders, principal architect of the National Sovereignty and Resilience Act and founder of The American Deal. Also acceptable: “founder of The American Deal” or “principal architect of the NSRA.” Please avoid improvised titles such as “campaign founder,” “bill author,” “policy activist,” or “organization president.” Always include the middle initial D.

Fact sheet

Quote Bank

Short, on-record quotations cleared for direct use. Attribution: Santonio D. Sanders, principal architect of the NSRA. Approved 2026-11-08 (v2026.7).

WHY IT WAS WRITTEN

“I wrote this because the country keeps being told it has to choose between helping people and being responsible with money. That is a false choice, and the math shows it.”

WHY FIVE BILLS

“It is one integrated Act, but it is deliberately not all-or-nothing. We packaged it as five coordinated bills so that if some pass and others stall, Americans still get major wins.”

FISCAL DISCIPLINE

“This is a fiscally conservative document by result. It is modeled to reduce the deficit by $2.9 trillion over ten years and writes a hard deficit limit of 4.5% of GDP into law for the fourth year.”

HEALTHCARE

“Nobody should lose a house because they got sick. The Basic Minimum Plan runs through competing private carriers, not a government takeover, and it covers the people the current system leaves out.”

HOUSING

“When Wall Street buys up starter homes by the thousand, first-time buyers lose. Capping corporate single-family ownership at fifty homes per metro puts those houses back within reach of families.”

STUDENT DEBT

“We are not cancelling the principal. We are ending the interest that turns a fair debt into a lifelong one.”

PRIVATE EQUITY

“Private equity has no business owning your hospital, your ambulance, or your 911 call. The NSRA would write that line into law.”

CITIZEN AUTHORSHIP

“This was written outside the lobbying system, by someone who has actually run federal programs. It answers to the public, not to a donor class.”

THE 2028 STRATEGY

“I do not need the credit. The draft is complete and published in full. Whoever runs on it first can have it.”

EXTERNAL REVIEW

“We label what has been reviewed internally and what still needs independent and official scoring. We are inviting CBO and JCT to score it, not claiming they already have.”

Reference

Key Acronyms & Terms

NSRA	National Sovereignty and Resilience Act
SIRF	Strategic Infrastructure Reinvestment Fund
FMIA	Federal Market Integrity Administration
FDVM	Federal Data Veracity Matrix

Separate downloads

Companion Artifacts

The following are available as separate downloads from the Press & Media portal, so this package stays focused while data journalists can pull structured files directly:

- State press briefs, a printable one-pager per state (affected population, strongest titles, sourcing).

- Machine-readable datasets (CSV and XLSX): revenue streams, 10-year fiscal projections, state impact, title-to-bill and title-to-committee maps, and a source register, each with a data dictionary.

- The scorer workbook: a formula-driven model (assumptions, streams, program costs, phase-in, ten-year window, low/base/high) a reviewer can re-score.

- Figure-by-Figure Sourcing guide and the full statutory text (Policy Vault).
