How to read this guide

Each figure carries an evidence status. Statutory parameters (an insulin cap, a deficit limit) are text of the bill, not estimates. Fiscal figures are NSRA model estimates built on published scores of comparable policies; they are not official CBO or JCT scores. The single-source model, its inputs and its scripts are published with the datasets so anyone can reproduce every number here.

Part 1 — Headline figures

Figure	Value	Basis	Status
Full-ramp revenue	$542B	Sum of 18 streams (Schedule G). Conservative floor $442B.	Modeled
Costs, outlays and infrastructure	$533B	Program costs $140B, outlays and infrastructure $393B, net of Medicare payment-integrity savings.	Modeled
Core programs and middle-class tax cut, net per year	$9B	Revenue less costs; –$91B at the conservative floor with the same costs.	Modeled, sensitivity tested
Fiscal Sustainability Plan	$345B/yr	Sec. 3410, seven measures at full effect (Part 3).	Modeled
Ten-year deficit reduction	$3.2T	Including lower interest costs; $2.9T before; range $2.3T–$3.8T. Core alone $0.3T.	Modeled, sensitivity tested

Part 5 — How to verify independently

Read the statute and Schedule G at TheAmericanDeal.org/bill-text. Check the baselines at cbo.gov, jct.gov, gao.gov and ssa.gov/oact. Re-run the tax provisions in Tax-Calculator (pslmodels.github.io/Tax-Calculator) with the published scripts. The project invites official CBO and JCT scoring and will publish the results whatever they show.
